G17 CHASSIS

The bar was raised fairly high to improve on the G9 chassis platform. But after nearly two years of concept sessions and track side testing of over 7 prototype chassis; the 2017 Grizzly has been completed.

Size: 33" / 35" / 37"

Get a G17 and see the difference:

Experience simple speed at an affordable cost. Provide the driver with a car that can embolden their capability to win races. Build a race team around a product capable of winning on all track surfaces and oval configurations.

G17 Performance

- Rear shock positions to create less slip through the turns
- Rear geometry that allows the car to break out and release from the corner increasing acceleration
- Rear adjustability to slow or increase the pivot point of center corner rotation
- Short run drive that is a leap ahead of any chassis built by NC Chassis to date

DESIGN CHANGES WERE MADE FOR GREAT SHORT-RUN SPEED AND SOLID LONG-RUN PERFORMANCE.
